

My First Website

Understanding HTML 5

A Step-by-Step Tutorial

Name: _____

Class: _____

Date: _____

I. **HTML Lesson 1: The Basics.**

1. Create a folder and name it Practice. This is where you will save all of your HTML documents.

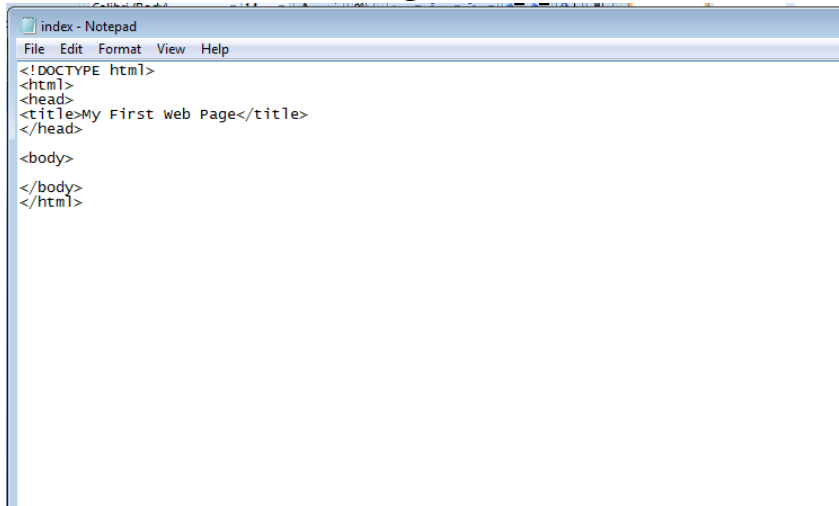

2. Open Notepad on your computer: Start → All Programs → Accessories → Notepad.
3. Type the following **exactly** how you see it below:

```
<!DOCTYPE html>  
<html>  
<body>  
  
</body>  
</html>
```

Please Note: <!DOCTYPE html> is the declaration that lets the Web browser know which version of HTML it is using.

4. You are now going to add the <head> and <title> element to your page. Right under the <html> tag, type the following:
<head>
<title>My First Web Page</title>
</head>

You should have something that looks like this:

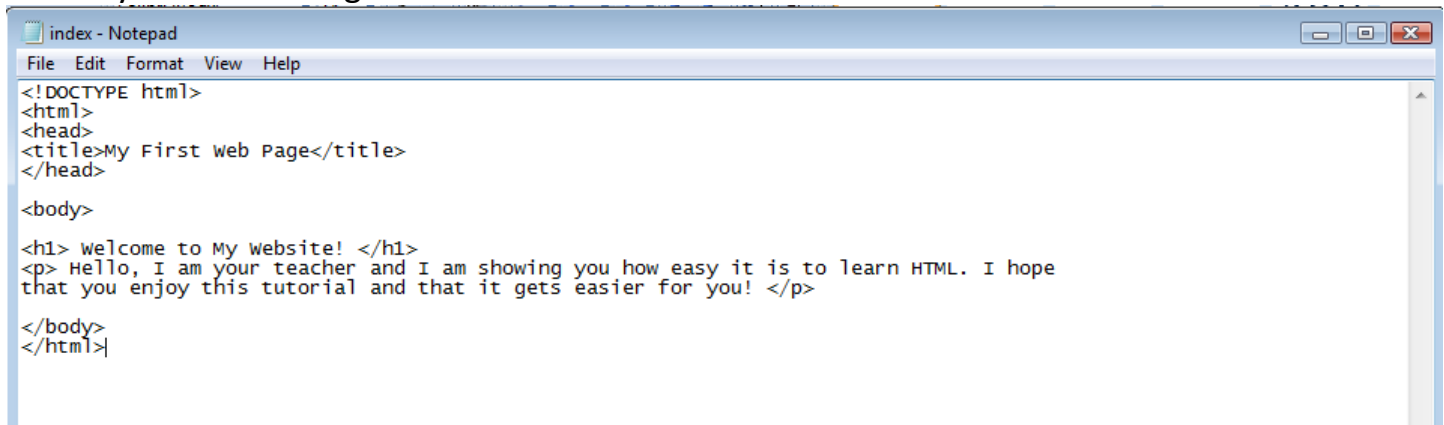

5. Let's add some text to the code and test it out! The information in between the <body> tags is what displays on a Web browser. Right after the <body> tag, type:

```
<h1> Welcome to My Website! </h1>
```

```
<p> Please type a paragraph about yourself here. </p>
```

The <h1> </h1> tags indicate that the text is to be a heading. <h1> is the largest size and <h6> is the smallest. These tags are to be used for headings and not to make paragraph font larger!

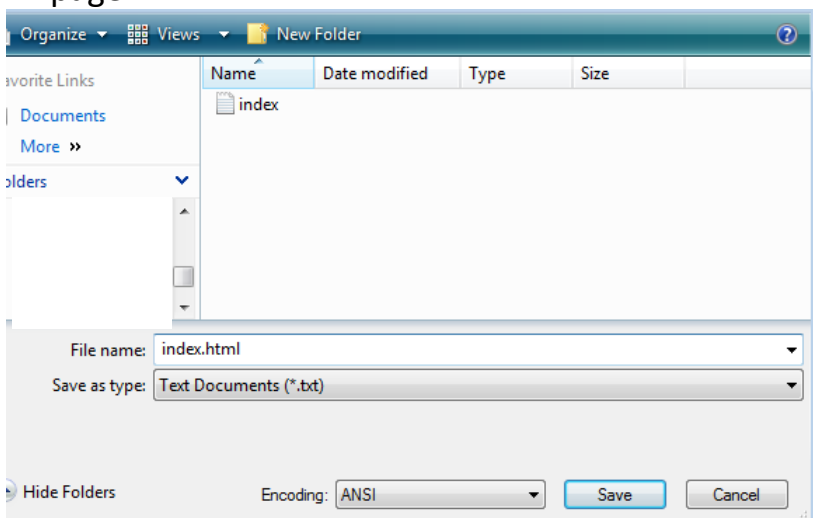

You may see something like this:

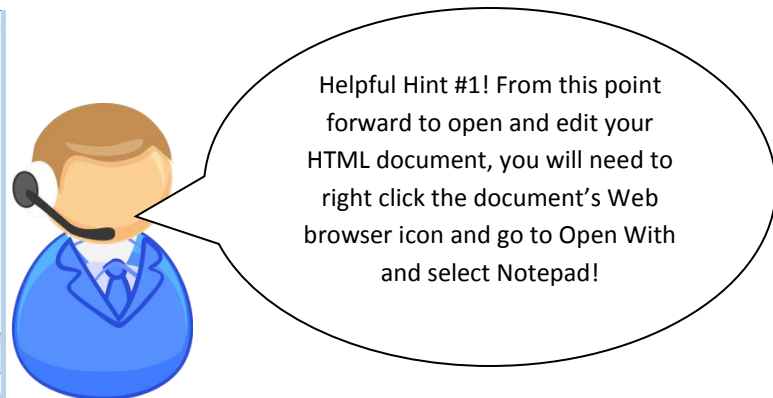

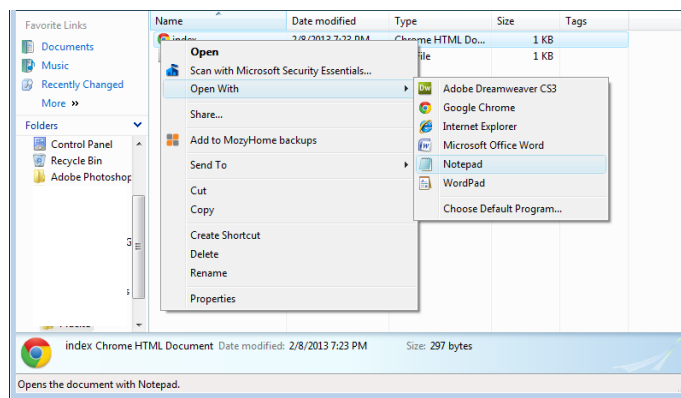

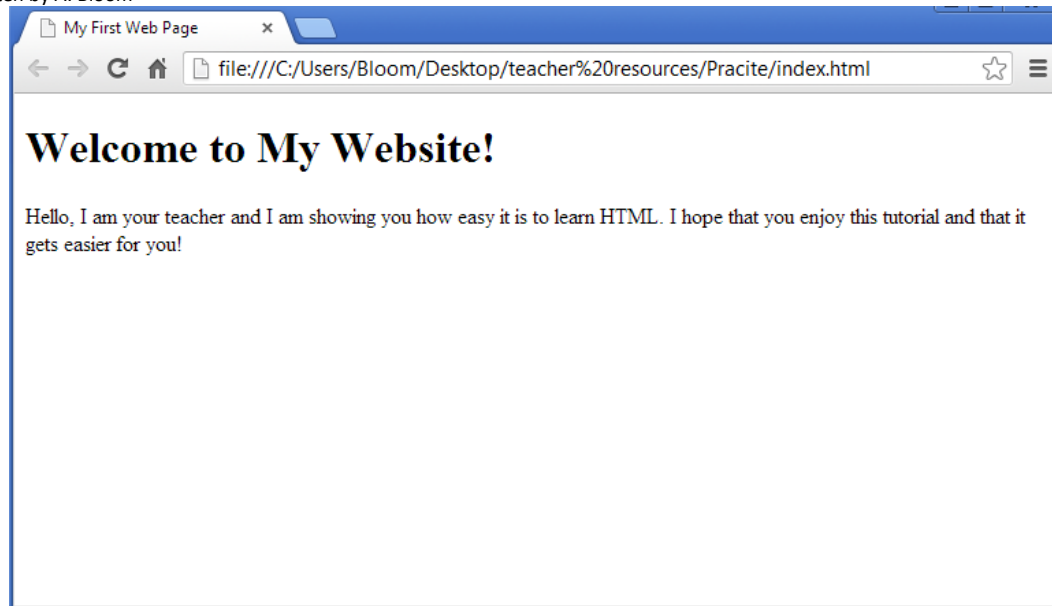

```
index - Notepad
File Edit Format View Help
<!DOCTYPE html>
<html>
<head>
<title>My First web Page</title>
</head>
<body>
<h1> welcome to My website! </h1>
<p> Hello, I am your teacher and I am showing you how easy it is to learn HTML. I hope
that you enjoy this tutorial and that it gets easier for you! </p>
</body>
</html>
```

Let's save our code in Notepad and take a look!

6. Click File → Save As. Save the document as index.html, select the folder you created named "Practice" and click save. Please note: you need to type the file extension .html in order to make this work. Saving this document as index indicates that it is the home page.

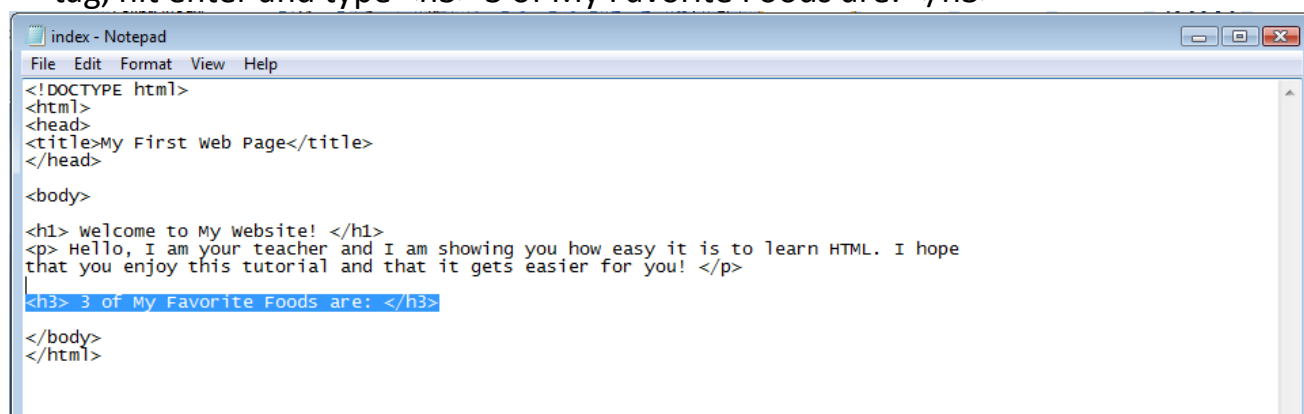

7. To view your newly made Web page, double click the index icon in your folder. It will now open in your Web browser. Example:

Great work! Let's continue!!!

8. Let's add another heading! Right below your paragraph about yourself, after the </p> tag, hit enter and type <h3> 3 of My Favorite Foods are: </h3>

Notice that there is "extra white space" between each section of code??? Doing this may be easier on your eyes. The Web browser does not read the white space, so feel free to add some if it is easier on your eyes as well!

9. You are now going to create an ordered list. After the `</h3>` tag, hit enter and type:

```
<ol>
```

```
<li> list a favorite food </li>
```

```
<li> list a favorite food </li>
```

```
<li> list a favorite food </li>
```

```
</ol>
```

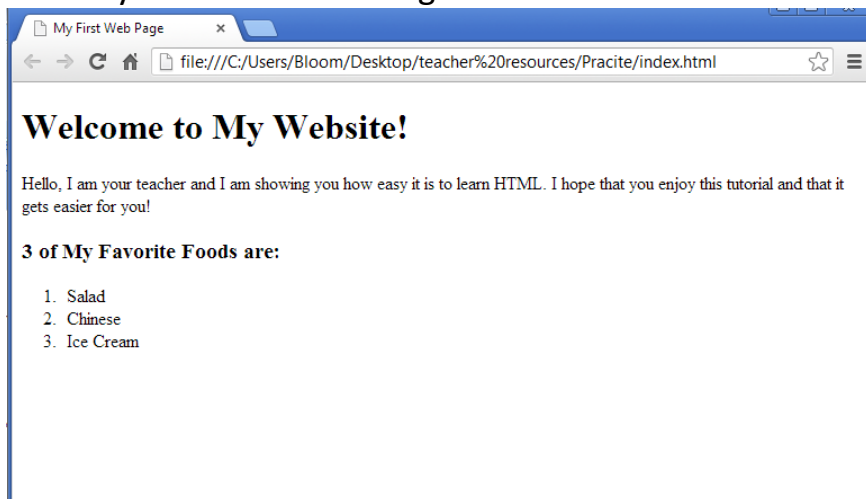

****Please list your own favorite food where indicated! ****

10. Save your document (CTRL S or File → Save). Refresh or open it back up in your Web browser to see how it looks!

Tip #2: You do not need to close Notepad to view your HTML document in a Web browser! You can have both files open at the same time and after each save click the refresh button on your Web browser!

You may now see something like this:

11. Let's go back and add a Horizontal Line after the Welcome to My Website heading. After the `</h1>` tag hit enter and type `<hr>`. Click save and refresh your browser. What does it do?

That's right- it adds a line under the heading of your Webpage!

12. You are doing terrific. Let's add one more paragraph of information. Under your ordered list, at the end of the `` tag hit enter and type:

```
<br>
```

`<p> Type a paragraph about what you want to be when you get older </p>`

`
`

```
index - Notepad
File Edit Format View Help
<!DOCTYPE html>
<html>
<head>
<title>My First web Page</title>
<meta name="keywords" content="about me, student, HTML, learning">
<meta name="description" content="this website is how I am going to learn HTML."/>
</head>
<body>
<h1> welcome to My website! </h1>
<hr>
<p> Hello, I am your teacher and I am showing you how easy it is to learn HTML. I hope
that you enjoy this tutorial and that it gets easier for you! </p>
<h3> 3 of My Favorite Foods are: </h3>
<ol>
<li> salad </li>
<li> Chinese </li>
<li> Ice Cream </li>
</ol>
<br>
<p> when I get older I want to be a teacher. It is a dream that I had since I was very young.
I plan on attending college and earn a Master's Degree in education. </p>
<br>
<h3> 3 of My Favorite colors are: </h3>
<ul>
<li> Blue </li>
<li> Purple </li>
<li> Green </li>
</ul>
```

Helpful hint #3! Did You Know that not all tags need a closing tag? Tags like `<hr>` (horizontal rule) and `
` (break) have no other set of instructions and only require one set of tags.

13. The last piece of information that we will add on our homepage is an Unordered List of our favorite colors. After the `
` tag, hit enter and type:

`<h3> 3 of My Favorite Colors are: </h3>`

``

` Type your favorite color here `

` Type your favorite color here `

` Type your favorite color here `

``

Click Save and refresh your Web browser to view your Website.

Welcome to My Website!

Hello, I am your teacher and I am showing you how easy it is to learn HTML. I hope that you enjoy this tutorial and that it gets easier for you!

3 of My Favorite Foods are:

1. Salad
2. Chinese
3. Ice Cream

When I get older I want to be a teacher. It is a dream that I had since I was very young. I plan on attending college and earn a Master's Degree in education.

3 of My Favorite Colors are:

- Blue
- Purple
- Green

Lesson 1 Review

Find the missing code. Please fill in the blanks with the correct opening or closing HTML tags below.

1.

<!DOCTYPE html>

<html>

<body>

</body>

</____>

____ out of 4

2.

<h3> 3 of My Favorite Colors are: <____>

 Type your favorite color here

 Type your favorite color here

<____> Type your favorite color here

____ out of 5

3.

<____> Type a paragraph about what you want to be when you get older </p>

____ out of 4

4.

< _____ >

< _____ >My First Web Page</title>

</head>

_____ out of 8

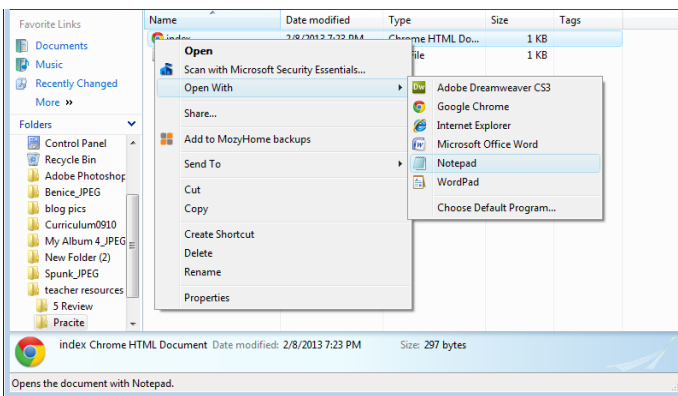

Total: _____ out of 21

II. HTML Lesson 2: Attributes and Formatting

Attributes are special codes in HTML that allow you to add special features such as a hyperlink, Meta Tag, image or style sheet.

1. Open (if needed) your index.html document by right clicking the icon and going to open with → Notepad.

2. You are first going to add Metadata within the <head> elements. A Meta Tags are keywords and descriptions that briefly describe the Website that you are creating to a Web browser or search engine. It can also provide information such as the copyright year and designer/developer of the Website. **This information is not viewed on your Website.**

First, we will enter Meta Tags for 'keyword' searches for search engines. After the </title> tag in your html document, hit enter to start a new line and type:

```
<meta name="keywords" content="about me, student, HTML, learning">
```

Notice how each keyword is separated by a comma???

3. When you are done typing the Meta Tag keyword attribute, hit enter. You are now going to add the Website description to the head element. Type:

```
<meta name="description" content="This Website is how I am going to learn HTML.">
```

```
index - Notepad
File Edit Format View Help
<title>My First web Page</title>
<meta name="keywords" content="about me, student, HTML, learning">
<meta name="description" content="This website is how I am going to learn HTML.">
<!-- This is a comment and I am learning HTML -->
</head>
<body>
```

4. Save your HTML document by clicking File → Save or by pressing CTRL and S on the keyboard.
5. Adding a comment. A comment can be used in your HTML code for you to add any additional information, or reminders to yourself. This is NOT viewed in the Web browser and can only be viewed in the code.

After your last Meta Tag, type:

```
<!-- This is a comment and I am learning HTML -->
```

Example:

```
index - Notepad
File Edit Format View Help
<title>My First web Page</title>
<meta name="keywords" content="about me, student, HTML, learning">
<meta name="description" content="This website is how I am going to learn HTML.">
<!-- This is a comment and I am learning HTML -->
</head>
<body>
<h1> welcome to My website! </h1>
<hr>
<p> <ins> Hello, I am your teacher and I am showing you how easy it is to learn HTML. I hope
that you enjoy this tutorial and that it gets easier for you! </ins></p>
<h3> 3 of My Favorite Foods are: </h3>
<ol>
<li> Salad </li>
<li> Chinese </li>
<li> Ice Cream </li>
</ol>
<br>
<p> when I get older I want to be a teacher. It is a dream that I had since I was very young.
I plan on attending college and earn a Master's Degree in education. </p>
<br>
<h3> 3 of My Favorite colors are: </h3>
<ul>
<li> Blue </li>
<li> Purple </li>
<li> Green </li>
</ul>
```

6. Formatting text in HTML. **Bold**, *Italics*, ^{Superscript} and _{Subscript} are just a few examples of formatting text in HTML. For this tutorial you will learn how to apply a few of the basics.

Remember! You will need opening <> and closing </> tags for formatting text as well!

Create a new paragraph at the end of your 'unordered list' by creating a new line and typing:

<p> I am now going to show you that I learned how to make text bold and <i> text italic </i> by learning HTML at my school! I can even _{subscript text} and ^{superscript text} as well! </p>

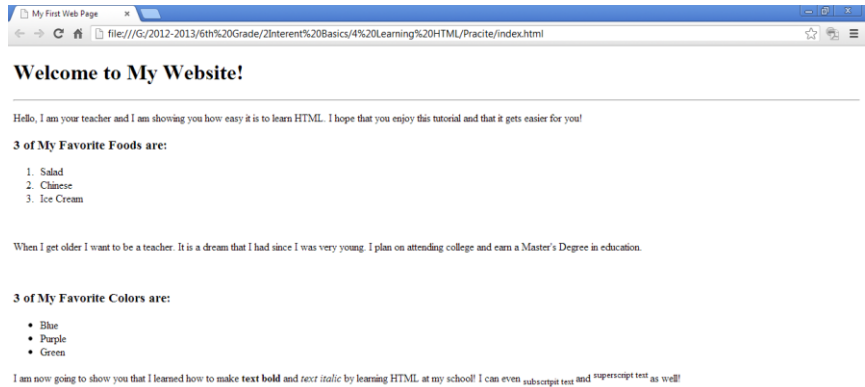

```

index - Notepad
File Edit Format View Help
<title>My First web Page</title>
<meta name="keywords" content="about me, student, HTML, learning">
<meta name="description" content="This website is how I am going to learn HTML.">
<!-- This is a comment and I am learning HTML -->
</head>
<body>
<h1> welcome to My website! </h1>
<hr>
<p> <ins> Hello, I am your teacher and I am showing you how easy it is to learn HTML. I hope
that you enjoy this tutorial and that it gets easier for you! </ins></p>
<h3> 3 of My Favorite Foods are: </h3>
<ol>
<li> Salad </li>
<li> Chinese </li>
<li> Ice cream </li>
</ol>
<br>
<p> when I get older I want to be a teacher. It is a dream that I had since I was very young.
I plan on attending college and earn a Master's degree in education. </p>
<br>
<h3> 3 of My Favorite Colors are: </h3>
<ul>
<li> Blue </li>
<li> Purple </li>
<li> Green </li>
</ul>
<p> I am now going to show you that I learned how to make <b> text bold </b> and <i> text italic </i>
by learning HTML at my school! I can even <sub> subscript text </sub> and <sup> superscript text </sup>
as well! </p>
</body>
</html>

```

7. Save your HTML document and open up your 'index.html' in your Web browser. Remember, unless you uploaded your Web site to a hosting Web server they cannot be viewed by others!

Lesson 2 Review

1. **Practice!** Change the title {<title> My First Web page </title> to Your Name's Website.

Example: <title> Jan Doe's Website </title>

_____ out of 5

2. Add one of the following formatting HTML code to the first paragraph where you typed about yourself. Make sure these tags are inside the opening and closing paragraph tags.

Opening Tag	Closing Tag	What it does
<mark>	</mark>	Highlights text
<blockquote>	</blockquote>	Indents and styles the text like you are quoting from an outside source.
		Represents text that has been deleted- shown as strikethrough.

`<ins>``</ins>`

Represents text that has been inserted- shown as underlined.

____ out of 5

3. What is missing from the following code?

`<!DOCTYPE html>``<html>``<head>``<title>_____</title>``<meta name="keywords" content="about me, student, HTML, learning">``<meta name="description" content="This Website is how I am going to learn HTML.">``<!-- This is a comment and I am learning HTML -->``_____``<body>``<h1> Welcome to My Website! </h1>``<hr>``<p> <ins> Hello, I am your teacher and I am showing you how easy it is to learn HTML. I hope that you enjoy this tutorial and that it gets easier for you! </ins> _____``< _____ >``< _____ >`

____ out of 10

Total: ____ out of 20

III. HTML Lesson 3: Hyperlinks, images and Design

Congratulations on your accomplishments! Now that you have a decent understanding of how html works, let's learn how to add hyperlinks and images.

1. Inserting a hyperlink. The code for inserting a hyperlink looks like this:

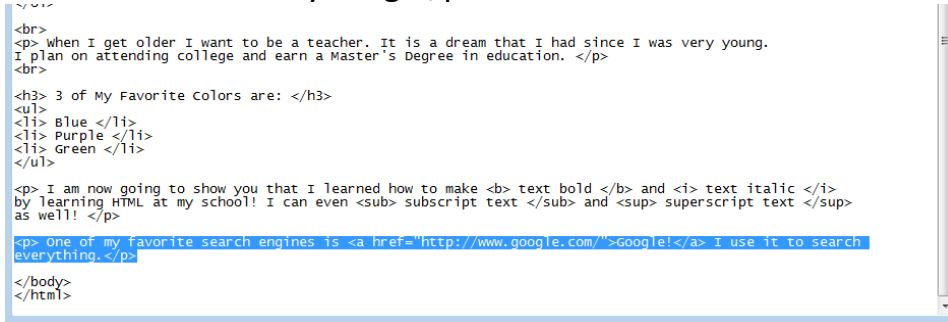

```
<a href="url">Link text</a>
```

So, let's add this to our Webpage!

2. Open up your Webpage in Notepad.

3. After your last paragraph (the one where you learned how to add attributes to your text), type the following code:

```
<p> One of my favorite search engines is <a href="http://www.google.com">Google!</a> I use it to search everything.</p>
```

```
<br>
<p> when I get older I want to be a teacher. It is a dream that I had since I was very young.
I plan on attending college and earn a Master's Degree in education. </p>
<br>
<h3> 3 of My Favorite colors are: </h3>
<ul>
<li> Blue </li>
<li> Purple </li>
<li> Green </li>
</ul>
<p> I am now going to show you that I learned how to make <b> text bold </b> and <i> text italic </i>
by learning HTML at my school! I can even <sub> subscript text </sub> and <sup> superscript text </sup>
as well! </p>
<p> One of my favorite search engines is <a href="http://www.google.com/">Google!</a> I use it to search
everything.</p>
</body>
</html>
```

4. Great job! Let's learn how to add a simple graphic. In your folder for your Website there is a clipart image called *Smile.png*. You will now add this image to your Webpage.

The image tag is an empty tag and uses the src (source) attribute to call upon the image.

5. Anywhere in your html document, insert the following code:

```

```

Save your index.html file and open it up in your Web browser. Notice how the image is extremely large?

6. We are now going to resize the image height and width by adding these attributes: width="200" height="200" to the end of your image code. Your code should now look like this: ``

7. Adding color to your text.

Please note that typically color changes are made best through CSS coding. Before we begin our lesson on CSS, we can change text color the good ole fashion way.

8. For this next part, I invite you to go to <http://html-color-codes.info/> to view the hexadecimal values for each color. Pick one that you would like to use while you are there!

Colors in html are referred to by their hexadecimal notation. This 6 number sequence is a combination of red, greens and blues and their various hues.

9. Under your first heading (`<h1> Welcome to my Website </h1>`) and the font color tags like as follows:

```
<h1> <FONT COLOR="E01ED6"> Welcome to My Website! </FONT> </h1>
```

Replace my example E01ED6 with the color of your choice!

Your first heading now has color!

On Your Own

Complete the next 3 assignments on your own. Each task is worth 10 pts.

1. Change the other two headings to a color of your choice. {Hint: the headings are the 3 of my favorite.....}
2. Add another hyperlink on your Web page. Create a new paragraph discussing what your favorite Website is and include a link to it!
3. Go to <http://cooltext.com/> and design your name as an image. Make any changes that you see fit. Once you are happy with your name logo, right click it and save it to your "practice" folder. Add it to the body of your Webpage. Make sure you are typing in the

Written by A. Bloom

correct file extension when adding in your code. You may also want to rename your name logo so it is easier for you to refer to.

Let's learn how to format some of your text. In order for text to center correctly in the newer versions of HTML, it is suggested to use CSS. Cascading Style Sheets, or CSS, is the way to apply style to your Web site. For larger sites you typically would create an external CSS Style and apply it to your entire sight. But that's a different tutorial for another day! For now, we will apply a simple CSS!
